Users feedback

The idea of centralizing all my health data and sharing it with trust is just excellent ! Keep on going !

I received my full medical record from my hospital with the complete history ! In one word, an awesome app !

Could you please ask my hospital to send all the data of my husband ? I has had a cerebral hemorrhagy and I really need the data.

I downloaded your app because I was looking for something similar for a long time. My treatments are serious and could have fatal interactions. Your app is VITAL to me. Congratulations !

I am 78 years old and my A7 is quite full !

I found that app excellent and easy to use.

When I go to Russia, doctors understand a bit of English so can read my medical records.

I can't wait for my hospital to use it !

I'm talking about it to everyone I can !

I was really impressed with the concept of taking control of my own medical records for me and my family. I have put all my basic family information into the app. I really appreciated the app when my husband had a ski accident and required emergency neuro surgery. I had all the information I needed in my phone!
